# 1 Introduction

This document explains how to use rst2pdf. Here is the very short version:

```
rst2pdf.py mydocument.txt -o mydocument.pdf
```

That will, as long as mydocument.txt is a valid Restructured Text (ReST) document, produce a file called mydocument.pdf which is a PDF version of your document.

```
def test(self):  
    self.do_it()
```

Oh my dog.
